PROFESSIONAL SUMMARY

Building reliable and scalable backend systems for a fintech SaaS product, with hands-on experience across API development, data management, third-party integrations, and real-time processing. Proficient in Node.js, TypeScript, Express.js, MongoDB, Redis, BullMQ, WebSockets, and Docker, with experience developing services for portfolio management, broker connectivity, financial data processing, and background job workflows. Comfortable working across system architecture, database design, caching, asynchronous processing, and DevOps, with a focus on building maintainable and production-ready backend solutions.

TECHNICAL SKILLS

- **Technologies:** TypeScript, Express.js, REST APIs, Python, Docker, Node.js
- **Backend Systems:** Redis, BullMQ, WebSockets, Socket.IO, Background Jobs, Caching
- **Databases:** MongoDB, Redis, PostgreSQL, MySQL

EXPERIENCE

Full Stack Developer | PocketWise Technologies Pvt. Ltd.

Feb 2025 to May 2026

- Developed and maintained backend services for a live fintech SaaS platform using TypeScript, Express.js, MongoDB, Redis, Node.js.
- Developed REST APIs for user management, portfolio management, broker connectivity, performance tracking, portfolio scoring, and financial data workflows.
- Integrated third-party broker APIs for authentication, holdings, portfolio data, and market information.
- Worked on MongoDB database operations and backend data flows for portfolio and financial data.
- Implemented Redis caching and background processing for frequently accessed data and asynchronous application workflows.
- Developed scheduled backend jobs for market-data fetching and price updates.
- Implemented WebSocket/Socket.IO-based real-time data delivery for portfolio and market updates.
- Worked on backend architecture, debugging, database operations, API reliability, and production issue resolution.

PROJECTS

AI Customer Support & Ticket Automation Platform | *Tech: FastAPI, Python, PostgreSQL, Redis, RAG, WebSockets, Docker*

- Built an AI-powered customer support platform using FastAPI and PostgreSQL for ticket management, knowledge-base management, authentication, and role-based access control.
- Implemented a RAG pipeline with asynchronous Redis-based processing for document ingestion, knowledge retrieval, and context-aware AI responses.
- Developed real-time AI response and ticket updates using WebSockets/SSE, with Dockerized services and database migrations.

Portfolio Engine | *Tech: Node.js, TypeScript, MongoDB, Redis, WebSockets*

- Built a backend portfolio management system using Node.js, TypeScript, and Express.js, developing REST APIs for portfolio, holdings, market data, and user operations.
- Designed a worker-based architecture for asynchronous portfolio and market-data processing, using Redis Pub/Sub for inter-service communication and Redis caching for frequently accessed data.
- Implemented Socket.IO-based real-time data delivery to push portfolio and market updates to connected clients, with MongoDB for persistent data storage.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science, Parul University, Vadodara, Gujarat | Sept 2022 to May 2026 | CGPA: 8.63/10
Class XII (RBSE), PCM, Shah Prathaviraj Nawalji Govt. Sr. Sec. School, Rani | 2021-2022 | 81%
Class X (RBSE), Shah Prathaviraj Nawalji Govt. Sr. Sec. School, Rani | 2019-2020| 74.17%
